Because some of the competitors withdrawn themselves from the race, the first start was shifted keeping the last starting slot the same.

Therefore, the Organiser has moved the Quarantine closing time at 11:00

Competition and warm-map
maps are Offset printed while
Model event maps were Digital

Starting procedures

In Bulletin 4 is written:

“Prestart and start are very close, with insignificant climb”

Due to forest works in the starting area, we have to change.

Now the situation is:

- **Where in the warm-up map is drawn the triangle of the start → now in this place there is the GPS delivery**
- **Minute -5 is 110 meters + 20 meters climb far from the GPS delivery area**
- **From -5 to start it's 90 meters + 20 meters climb**

Some fences after the start within approx 100-200m, not on the map, made by forest workers and not related to the competition – they are crossable

IT has now published Athletes SI
card Numbers on Eventor

Please check that we assign the
correct number
